myproject/urls.py:

"""

URL configuration for myproject project.

The `urlpatterns` list routes URLs to views. For more information please see:

<https://docs.djangoproject.com/en/5.2/topics/http/urls/>

Examples:

Function views

1. Add an import: `from my_app import views`
2. Add a URL to `urlpatterns`: `path("", views.home, name='home')`

Class-based views

1. Add an import: `from other_app.views import Home`
2. Add a URL to `urlpatterns`: `path("", Home.as_view(), name='home')`

Including another `URLconf`

1. Import the `include()` function: `from django.urls import include, path`
2. Add a URL to `urlpatterns`: `path('blog/', include('blog.urls'))`

"""

`from django.contrib import admin`

`from django.urls import path, include`

`urlpatterns = [`

```
path('admin/', admin.site.urls),
path('webapp/', include('webapp.urls')),
path('formapp/', include('formapp.urls')),
path('ex1app/', include('ex1app.urls')),
path('ex2app/', include('ex2app.urls')),
path('homeex1app/', include('homeex1app.urls')),
]
```

Develop a simple web page to reproduce the given Captcha. Upon match, suitable message has to be displayed. If there is a mismatch for more than 3 times, TextBox has to be disabled.

Code:

homeex1app/urls.py:

```
from django.urls import path
from . import views

urlpatterns = [
    path("", views.index, name='index')
]
```

homeex1app/views.py:

```
from django.shortcuts import render

# Create your views here.

def index(request):
    return render(request, "homeex1app.html")
```

homeex1app/templates/ex2app.html:

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>Employee Form</title>

  <script>

    function checkEligibility() {

      let doj = document.getElementById("doj").value;

      if (doj === "") {

        document.getElementById("result").innerText = "";

        return;

      }

      let parts = doj.split("-");

      let joinYear = parseInt(parts[0]);

      let joinMonth = parseInt(parts[1]);

      let joinDay = parseInt(parts[2]);

      let today = new Date();

      let years = today.getFullYear() - joinYear;

      if (

        today.getMonth() + 1 < joinMonth ||

        (today.getMonth() + 1 === joinMonth &&

         today.getDate() < joinDay)

      ) {

        years--;

      }

      document.getElementById("result").innerText =
```

```
        years >= 5 ? "YES" : "NO";
    }
</script>
</head>
<body>
    <h2>Promotion Eligibility Form</h2>

    <form onsubmit="return false;">
        Employee ID:
        <select>
            <option>EMP001</option>
            <option>EMP002</option>
            <option>EMP003</option>
            <option>EMP004</option>
        </select>
        <br><br>

        Date of Joining:
        <input type="date" id="doj">
